

What is Vaultwarden?

Vaultwarden is CBTS's internal password manager that allows users to store, manage, and share sensitive information (such as passwords, TOTP keys, passkeys, notes, etc) securely.

We will use it primarily as a password manager for shared accounts/passwords, but also recommend using it for your individual CBTS account logins. It can also be used to securely share files & notes using the Send feature.

Vaultwarden integrates with/uses the Bitwarden suite of apps. Apps are available for Desktop and Mobile users and are available as extensions/add-ons for all major browsers.
